Cup and Saucer Vine
Cobaea scandens f. alba

Native to South & Central America

Bring a bit of tropical America into your garden with the cup and saucer vine, also called cathedral bells. This woody perennial looks great up a sunny wall, pergola or fence. In chillier areas treat as an annual or bring inside in a pot over winter.

How to grow: Sow seeds individually in small pots, in a temperature of 15-20°C (60-70°F). Transplant frequently, ensuring that individual plants are not entangled. Plant outside when all danger of frost is past, ensuring that the plant has adequate support for climbing. Fertile, moist soil will produce the best results. Annual summer climber for walls or fencing, or scrambling through shrubs and trees. Perennial in frost-free conditions.
